

Drone Services Canada Inc Receives Standing Special Flight Operations Certificate (SFOC)

New accreditation means no wait time for clients!

May 7th 2018 – Hamilton, ON, Canada. Drone Services Canada Inc. announced today that it has received a ***Standing Special Flight Operations Certificate*** (SFOC) from Transport Canada. This permits UAV/Drone missions to be flown in most of the airspaces without the added work and time loss of filing individual SFOCs, a process that can often take from 4 to 6 weeks to complete. DSCI is allowed to fly in Class G (uncontrolled) airspace and in Class C, D, E and F (controlled) airspace, day or night.

The achievement of this "*sought after goal*" came after a long and arduous process of first having to file Simple Applications for each and every individual mission DSCI had in their pipeline, then applying for a Complex Application for uncommon missions that required specific requirements and finally, after establishing a strong relationship with Transport Canada, we finally took the plunge and filed for our Standing SFOC. This will greatly increase our customer satisfaction as they will no longer have to wait to schedule their missions. **We'll be ready to fly within hours of their requests.**

Michael Brown, DSCI's CEO said: "We're very excited to receive this standing SFOC which will let us be more available to our clients at a moments notice. I want to thank the Transport Canada team as it was very cooperative and assisted us through their process efficiently and with great care. We're thrilled that we'll be able to offer our clients quicker turnarounds for their missions."

About [Drone Services Canada Inc.](#)

Drone Services Canada Inc. provides UAV ("Drone") services for the Agricultural, Construction, Industrial, Mining, Surveying, Real-Estate and Media/Advertising Industries. DSCI can also assist companies with the development of their own Drone divisions by providing consulting services designed to assist with the purchase of equipment, operations, training and management of such divisions under Transport Canada's guidelines. We are also in the midst of developing our own training programs that we will soon make available Online. All of our pilots are certified and hold impeccable safety records in the field.
